Saba Janelidze

Principal Engineer · Fintech & AI

Tbilisi, Georgia (UTC+4) · Remote hello@sabajanelidze.com LinkedIn GitHub

Since November 2022 I've worked on a crypto exchange licensed by the National Bank of Georgia: first its React customer app, then its backend and, since 2026, the architecture of its new Go core platform. I built its identity checks, audit history and payment-provider integration.

Open to new work: a full-time role, a contract, part-time work, a one-off project or a review.

Work

`Nov 2022 – now`

Bitnet

a crypto exchange licensed by the National Bank of Georgia (220,012 registered users; bitnet.ge, Oct 2026)

`2026 – now` **Principal Engineer:** the new core platform (Go). I lead its architecture.

- First author of 237 of its 278 architecture decision records (Oct 2026).
- Built the new identity checks and the audit history.
- Built the payment-provider integration: bank-app deposits, card payments and recurring card charges.
- Set the rule that every customer action declares how a repeat is handled; the build fails otherwise (38 of 38 actions, since Sep 2026).
- Wrote most of the team's AI coding set-up.

`2024 – 2025` **Backend Developer:** the backend (TypeScript, NestJS, GraphQL) and pages of the staff admin panel.

`2022 – 2023` **Frontend Developer:** the customer web app (React).

`2024 – 2025`

Chama · Backend Lead (part-time contract, alongside the exchange)

a restaurant platform with live dynamic pricing

- Designed and wrote the backend: NestJS, GraphQL, PostgreSQL, Redis.

Own products

2025 – now	**PlayTime** · Founder a booking marketplace for sports venues in Tbilisi: 19 padel clubs listed; booking with payment built, payments still in test mode
2026 – now	**WasteAway** · Founder door-to-door waste pickup for apartment buildings in Tbilisi: a live website and a worked-out cost model (pre-launch)
2026	**UniHub** · Founder a student portal for Agrarian University students: schedule, exams, grades and shared notes (live, on hold since April 2026)

Open source

Most of my work since 2023 is in my employer's private GitLab. These are public:

Arcana: 18 skills and 5 agents for Claude Code and Codex. 2,452 npm downloads in the last year.

acctswap: a Rust command-line tool for Claude Code users who run many sessions across machines. A TLA+ model, Kani proofs and 435 of 435 planted bugs caught by its tests.

OrgClone and UserClone: clone a whole GitHub org, or all your repos onto a new computer. 1,997 npm downloads in the last year.

Stack

Languages: TypeScript, Go, SQL, Rust (tools)

Backend: NestJS, GraphQL, PostgreSQL, Redis, Job queues, OpenTelemetry

Frontend & mobile: React, Next.js, Astro, Tailwind, Expo

Cloud: Cloudflare Workers & D1, Vercel, Railway, GitHub Actions

AI: Claude Code, Codex, LLM APIs with provider fallback

Languages

Georgian (native), English (fluent, C1)
